Hiring Team - AI Engineer Intern (Summer 2026)

Magellan Technology Research Institute · Summer 2026

Dear Magellan Engineering and Research Teams,

Your posting calls for hands-on work building **production-ready AI solutions** using **machine learning** and real-world engineering - that is exactly what I shipped at EURECOM, where I ranked **#1 on the class leaderboard** by fine-tuning a 428M-parameter CLIP ViT-L/14 on 250K images across 25+ generator types, delivering a robust, inference-optimized system under real GPU constraints.

On the engineering side: at Orange Maroc I owned an **end-to-end ML pipeline** processing **100K+ telemetry records**, cutting manual analysis time by **~60%** and mapping segmentation outputs directly to business decisions - the kind of **impactful project** your JD describes. On the research side: I ran systematic ablation studies across transformer unfreezing depth, learning rate schedules, and **TTA strategies**, documenting findings with the rigor your mentored **research team** environment expects.

Magellan's focus on **agentic frameworks** and RAG - applied research areas sitting at the boundary of systems engineering and cutting-edge AI - is exactly where my transformer fine-tuning background and pipeline discipline can add immediate value. I would welcome the chance to discuss how I can contribute this summer.

Sincerely,

AYMANE AIT DADS
