Hiring Team - Research Intern - Medical Imaging

Siemens Healthineers · United States

Dear Siemens Healthineers Hiring Team,

Your role calls for someone who can support supervised learning for tasks such as **detection, classification, and segmentation** across complex imaging data - exactly the space where I ranked **#1 on the EURECOM leaderboard** by fine-tuning a **CLIP ViT-L/14 (428M parameters)** on 250K images spanning 25+ generator types, designing rigorous ablation experiments to understand what drives model generalization versus overfitting.

On **dataset curation and quality control**, I built a **10-view test-time augmentation** protocol to stress-test out-of-distribution robustness - directly analogous to validating AI outputs against a held-out clinical standard. On multimodal and structured data pipelines, I engineered an end-to-end ML pipeline over **100K+ records** at Orange Maroc, reducing manual analysis time by **~60%** through cross-validated modeling and structured reporting to senior stakeholders.

Siemens Healthineers sits at the intersection of AI research and clinical deployment - your AI-Rad Companion product line is one of the few places where image quantification models actually reach radiologists in practice. I want to contribute to that pipeline at the research stage. I would welcome the chance to discuss how my background fits this role.

Sincerely,

AYMANE AIT DADS
