Hiring Team - 2026 Fall Intern, ML/NLP Research

Samsung Research America · Mountain View, CA, United States

Dear Samsung AIC Hiring Team,

Your posting calls for expertise in **LLM training and fine-tuning techniques** to build adaptive, personalized AI systems for Samsung devices - exactly the work I have been doing at EURECOM. I ranked **#1 on the EURECOM leaderboard** by fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250K samples, running structured ablation experiments across transformer block unfreezing depth, learning rate schedules, and augmentation strategies to maximize out-of-distribution generalization.

On the NLP side, I built a complete **transformer fine-tuning pipeline** for tweet sentiment analysis - from TF-IDF baseline through word2vec embeddings to fine-tuned transformers - improving accuracy by **12 percentage points** over baseline, directly demonstrating the **natural language processing** and representation learning skills your team requires. For systems robustness, I applied **FP16 mixed precision with GradScaler** and **10-view test-time augmentation**, optimizing inference under real GPU constraints - the kind of production discipline an adaptive on-device AI system demands.

Samsung AIC's focus on pushing NLP state-of-the-art for products reaching hundreds of millions of users worldwide is a rare combination of research rigor and real-world scale. I would welcome the chance to discuss how my work contributes to that mission - please feel free to reach out at Ayman.Ait-dads@eurecom.fr.

Sincerely,

AYMANE AIT DADS
