Hiring Team - Internship - Data/ML/AI

Dialectic · Zug, Switzerland

Dear Dialectic Hiring Team,

Your requirement for **machine learning and statistical analysis methods** combined with a deep understanding of **financial markets** describes exactly what I have been building toward. At EURECOM, I ranked **#1 on the class leaderboard** by fine-tuning a 428M-parameter CLIP ViT-L/14 on 250K samples - running rigorous ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies to prove which design decisions actually generalize. That same discipline - hypothesis, experiment, measure, ship - is what quantitative work in DeFi demands.

On the engineering side, I built an **end-to-end ML pipeline** processing **100K+ telemetry records** at Orange Maroc using **Random Forest and KMeans**, reducing manual analysis time by **~60%** and mapping segmentation outputs directly to commercial decisions - the kind of pipeline ownership your role calls for. I also built transformer architectures from scratch in **PyTorch** across computer vision, NLP, and audio domains, and I am actively developing fluency in **Solidity** as I engage with on-chain protocol mechanics.

Dialectic operates at the intersection of adversarial crypto markets and rigorous quantitative research - an environment where a model that does not generalize costs real capital, not just a leaderboard rank. I would welcome the chance to discuss how my background fits your current research agenda.

Sincerely,

AYMANE AIT DADS
