Hiring Team - Data Scientist - Neural Net Forecasting

Tesco · Welwyn Garden City, United Kingdom

Dear Hiring Team,

Your role calls for a Data Scientist whose **primary modelling focus will be neural network-based forecasting**, with rigorous evaluation against robust baselines and scalable deployment. At EURECOM, I designed and ran end-to-end ablation experiments on a **428M-parameter CLIP ViT-L/14** model - systematically varying transformer block unfreezing depth, learning rate schedules, and augmentation strategies across **250K training samples** - and ranked #1 on the private class leaderboard. That is the evaluation discipline this role demands, applied from day one.

On **scalable deployment**, I engineered an end-to-end ML pipeline on **100K+ live telemetry records** at Orange Maroc using **Random Forest and KMeans**, cutting manual analysis time by **~60%** and mapping outputs directly to commercial decisions - exactly the kind of big-data, business-facing pipeline Tesco's supply chain and fulfilment domains require. On **rigorous validation**, my transformer autoencoder for unsupervised anomaly detection was benchmarked on a DCASE-style protocol, reaching **AUC 0.80** with zero labeled anomalies - proving I validate models against meaningful baselines, not just training metrics.

Tesco runs one of the largest retail forecasting systems in Europe, where a marginal improvement in demand prediction directly affects stock availability for millions of customers - that is a deployment scale and a real-world consequence that makes this role genuinely different. I would welcome the chance to discuss how my experience fits the Neural Net Forecasting team's roadmap.

Sincerely,

AYMANE AIT DADS
