Hiring Team - Disney Research Studio Intern

The Walt Disney Studios · Zurich, Switzerland

Dear Disney Research Studio Hiring Team,

Your role calls for researchers who can **develop and implement capabilities in image processing** with a **proven track record of achieving significant results** - I ranked **#1 on the EURECOM private leaderboard** for AI-generated image detection by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples spanning 25+ generator types, including Stable Diffusion, DALL-E, and GAN variants.

On the **deep learning** and **computer vision** side, I designed rigorous ablation experiments across transformer block unfreezing depths, learning rate schedules, and augmentation strategies - proving that 1-epoch fine-tuning generalizes better than extended re-training. Separately, I built a **transformer autoencoder** for unsupervised fault detection on industrial audio achieving **AUC 0.80** with no labeled anomalies, demonstrating that my work spans signal processing and **numerical optimization** beyond image tasks alone.

Disney Research Zurich sits at the exact boundary where production-grade visual systems meet fundamental research - the group's work on neural rendering and image synthesis is precisely the environment where my combination of rigorous experimentation and engineering discipline (FP16, GradScaler, end-to-end pipelines) would contribute from day one. I would welcome the chance to discuss how my background maps to your current research agenda.

Sincerely,

AYMANE AIT DADS
