Hiring Team - AI Intern

Hendrickson International · Woodridge, IL, USA

Dear Hendrickson Hiring Team,

Your AI Intern role calls for hands-on work with **Generative AI**, **Retrieval-Augmented Generation (RAG)**, and **agentic AI workflows** - exactly the layer of applied AI I have been building toward. At EURECOM, I ranked **#1 on the private leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples spanning 25+ generative model types, which required me to reason deeply about how generative systems produce artifacts - the same foundation needed to build RAG pipelines and agentic systems that are robust against them.

On the **backend API development and enterprise data integration** side: at Orange Maroc I independently engineered an **end-to-end ML pipeline over 100K+ telemetry records**, reducing manual analysis time by **~60%** and delivering segmentation outputs that fed directly into commercial go-to-market decisions - shipped from raw ingestion to executive **Power BI dashboards**. On the **cloud deployment and MLOps** side, I have applied **FP16 mixed precision with GradScaler** and designed inference-optimized test-time augmentation to make large transformer models viable under real GPU constraints.

Hendrickson supplies suspension and truck systems to virtually every major commercial vehicle OEM - applying enterprise AI to that kind of industrial-scale operation, where data quality and system reliability are non-negotiable, is a concrete problem I want to work on. I would welcome the chance to discuss how I can contribute this summer.

Sincerely,

AYMANE AIT DADS
