Hiring Team - AI Engineering Intern (Hybrid)

Homebase · San Francisco, California

Dear Homebase Hiring Team,

Your brief calls for someone who can **embed with internal teams, map workflows, and ship AI-powered automations end-to-end** - that is exactly how I operated at Orange Maroc, where I independently owned a full pipeline from raw data ingestion through to executive-ready dashboards, reducing manual analysis time by **~60%** across **100K+ telemetry records**. I did not hand off to another team - I identified the pain point, built the solution, measured the result, and presented it to senior management.

Two proof points map directly to what you need here. First, on **rigorous experimentation and fast iteration**: I ran structured ablation studies across transformer unfreezing depth, learning rate schedules, and augmentation strategies while fine-tuning **CLIP ViT-L/14 (428M parameters)** on **250K samples**, ranking **#1 on the EURECOM leaderboard**. Second, on **full-stack, production-minded building**: at Orange Maroc I delivered **KMeans segmentation** that mapped 5 user profiles directly to commercial service tiers, translating a model output into a go-to-market decision - not a slide deck.

Homebase sits at the intersection of AI and small business operations - a space where LLM automations either save a shift manager 20 minutes or get ignored entirely. That gap between prototype and actual adoption is what I want to close this summer. I would welcome the chance to discuss how I can contribute starting June 2026.

Sincerely,

AYMANE AIT DADS
