Hiring Team - Agentic AI Intern

Panasonic North America · Newark, California, USA

Dear Panasonic Energy Hiring Team,

Panasonic Energy is building autonomous, agentic systems at the scale of the world's largest lithium-ion battery initiative - and that demands engineers who ship **production-grade AI**, not just prototypes. I ranked **#1 on the EURECOM leaderboard** for AI-generated image detection by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples, designing ablation experiments across transformer unfreezing depth, learning rate schedules, and augmentation strategies to prove what actually generalizes at scale.

At **Orange Maroc**, I engineered an end-to-end **ML pipeline over 100K+ telemetry records** - combining Random Forest, KMeans segmentation, and feature engineering - reducing manual analysis time by **~60%** and mapping 5 user performance profiles directly to commercial service tiers. Separately, my unsupervised **transformer autoencoder** for industrial audio fault detection achieved **AUC 0.80** with zero labeled anomalies, the kind of agentic, self-supervised reasoning that maps directly to autonomous manufacturing quality control.

Panasonic Energy's position as the backbone of Tesla's Gigafactory output - millions of cells per day on the fastest manufacturing lines in the world - is exactly the high-stakes, high-throughput environment where agentic AI can move from experiment to real impact. I would welcome the chance to discuss how I can contribute this summer.

Sincerely,

AYMANE AIT DADS
