PROFESSIONAL SUMMARY

Automated network quality analysis for Orange Maroc across 100K+ fiber-optic records, cutting manual analysis time by ~60% and delivering actionable maintenance recommendations directly to business stakeholders via Power BI dashboards. Ranked 17th out of 3,000+ teams (score 0.86/1.0, \$106K+ prize pool) in the NVIDIA Nemotron Reasoning Challenge - an ongoing competition - by fine-tuning a 30B-parameter model with LoRA SFT, demonstrating end-to-end AI engineering depth. Brings hands-on experience with LLM orchestration, agentic pipelines, prompt engineering, Claude API, LangChain, RAG, and Python-backed automation tooling directly aligned with Homebase's AI-first engineering mandate. Eager to embed with internal teams at Homebase, map real business workflows, prototype LLM-powered automations, and measure operational efficiency gains across Sales, Marketing, and Support functions.

CORE COMPETENCIES

AI-Powered Automation | LLM Orchestration | Agentic Pipelines | Python Scripting | Workflow Mapping | Rapid Prototyping | Operational Efficiency | Stakeholder Communication

WORK EXPERIENCE

Orange Maroc

Jul 2024 - Aug 2024

Data Science Intern - Casablanca, Morocco

- Designed and shipped an **automated clustering pipeline** mapping customer performance profiles to 5 commercial service tiers across 100K+ fiber-optic network records, output used directly by the network optimization team.
- Reduced **manual analysis time by ~60%** through automated feature engineering and model evaluation, freeing analyst capacity for higher-leverage business decisions.
- Built Random Forest and K-Means models on upload speed, latency, and jitter metrics to classify **network quality across thousands of nodes**, translating ambiguous signal data into structured business insights.
- Delivered stakeholder presentations converting model outputs into **actionable maintenance recommendations**, bridging technical findings with non-technical business partners via Power BI dashboards.

PROJECTS

AI Workflow Automation - LLM Reasoning & Agentic Pipeline Engineering

Kaggle · NVIDIA Nemotron Challenge · In Progress (June 2026)

- Ranked **17th / 3,000+ teams** (score 0.86/1.0, \$106K+ prize pool) in the NVIDIA Nemotron Reasoning Challenge by fine-tuning a **30B-parameter Mamba-Transformer** with LoRA SFT ($r=32$, BF16, completion-only loss, 8,192-token context).
- Built **custom verification pipelines** (cipher parser, 8-bit operation solver), ran controlled ablation experiments across LR schedules and augmentation strategies, and codified that reasoning-style consistency outweighs data volume in LLM SFT.

PyTorch · Unsloth · Hugging Face Transformers · PEFT · vLLM

AI-Generated Image Detection - CLIP Fine-Tuning & Ensemble Engineering

EURECOM ImSecu + NTIRE 2026 @ CVPR · 2025 · Ranked 1st in EURECOM class

- Ranked **1st in EURECOM class leaderboard** (0.791 AUC, private Kaggle benchmark) and submitted independently to NTIRE 2026 @ CVPR CodaBench international benchmark using a fine-tuned CLIP ViT-L/14 backbone (428M parameters).
- Shipped a **3-model ensemble with 10-view TTA** (flips, crops, blur, resizes) trained on 250K images across 25+ generator types using dual learning rates and FP16 mixed precision.

PyTorch · OpenCLIP · AdamW · Kaggle GPU

EDUCATION

Engineering Degree in Data Science (Master-level) - EURECOM

Sep 2023 - Present

Relevant coursework: Machine Learning, Deep Learning, NLP, Computer Vision, Cloud Computing, Web Applications, Statistics, Image Security

CPGE - Mathematics & Physics - Ibn Timiya

2021 - 2023

SKILLS

AI & LLM Engineering: Python | LLM Orchestration | LangChain | Claude API | RAG | Agentic Pipelines | Prompt Engineering

ML & Data Science: PyTorch | Hugging Face Transformers | Scikit-learn | LoRA / PEFT | Pandas | Power BI | SQL

Infrastructure & Tooling: Git | Linux | Docker (basic) | REST APIs | Supabase | PostgreSQL | Kaggle GPU
