Hiring Team - Data Science/AI&I Intern (Bachelors degree level)

Mayo Clinic · Rochester, Minnesota, USA

Dear Mayo Clinic AI and Innovation Hiring Team,

Mayo Clinic's AI and Innovation internship calls for applying **data science and machine learning** to problems where accuracy directly affects patient outcomes - a standard I have already been held to. At EURECOM, I ranked **#1 on the class leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples spanning 25+ image generator types, designing ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies to maximize out-of-distribution robustness.

At Orange Maroc, I engineered an **end-to-end ML pipeline** over **100K+ telemetry records** combining **Random Forest** and **KMeans**, reducing manual analysis time by **~60%** and mapping 5 user performance profiles directly to commercial service tiers - demonstrating that I translate model outputs into decisions, not just metrics. Separately, I built a transformer autoencoder for unsupervised anomaly detection achieving **AUC 0.80** with no labeled anomalies, a constraint closely analogous to rare-event detection in clinical data.

Mayo Clinic is ranked **#1** across more specialties than any other U.S. provider, and its AI and Innovation division operates at the intersection of that clinical depth and production-grade machine learning - exactly where I want to build. I would welcome the chance to discuss how my work fits your current projects.

Sincerely,

AYMANE AIT DADS
