Hiring Team - AI/ML Engineering Internship

Synopsys · Mountain View, CA, USA

Dear Synopsys Hiring Team,

Your internship calls for someone who can **develop and evaluate AI/ML prototypes** under real engineering constraints - that is exactly what I did when I ranked **#1 on the EURECOM private leaderboard** by fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250K images spanning 25+ generator types, applying FP16 mixed precision and 10-view test-time augmentation to build a model that generalizes beyond its training distribution.

On the **machine learning and data analysis** side, I engineered an end-to-end **ML pipeline at Orange Maroc** processing **100K+ network telemetry records** with Random Forest and KMeans, reducing manual analysis time by **~60%** and directly informing commercial go-to-market decisions. For **Generative AI** robustness, I ran systematic ablation studies across transformer block unfreezing depth (4/6/8 layers) and learning rate schedules, proving that controlled fine-tuning preserves generalization - the kind of rigorous **prototyping and testing** your role requires.

Synopsys sits at the intersection of silicon design and AI - building the chips that run the inference workloads I optimize in software. Closing that loop, from model architecture to hardware-aware deployment, is exactly where I want to operate. I would welcome the chance to discuss how I can contribute this summer.

Sincerely,

AYMANE AIT DADS
