Hiring Team - Entwicklung KI - Werkstudent

XRbit gUG (haftungsbeschränkt) · Bochum, Germany

Dear XRbit Hiring Team,

Your role calls for **Entwicklung und Training von KI-Modellen im Bereich Image Recognition / Computer Vision** integrated into a real-world system - exactly what I built at EURECOM, where I ranked **#1 on the class leaderboard** by fine-tuning a **CLIP ViT-L/14 (428M parameters)** on 250K images spanning 25+ generator types, designing test-time augmentation for robust out-of-distribution inference.

On the **Aufbau und Optimierung von Datensätzen** side: I ran systematic ablation studies across transformer unfreezing depth, learning rate schedules, and augmentation strategies to maximize generalization on unseen data. On the **Integration von KI-Modellen in eine lauffähige Systemarchitektur** side: at Orange Maroc I owned an end-to-end ML pipeline over **100K+ telemetry records** - from raw ingestion to **Power BI dashboards** presented to senior management - cutting manual analysis time by **~60%**.

XRbit sits at the intersection of XR hardware and applied KI, building systems that must work in the physical Makerspace environment at Ruhr-Universität Bochum - not just in a notebook. That constraint of real-world performance over benchmark performance is exactly the problem I find worth solving. I would welcome the chance to discuss how I can contribute to your Gesamtlösung from model to camera system to web interface.

Sincerely,

AYMANE AIT DADS
