Hiring Team - Afstudeerstagiair Generative AI & Agentic AI binnen SAP Technology

Capgemini · Utrecht, Netherlands

Dear Capgemini SAP Technology Team,

Your assignment asks someone who can **experimenteren, resultaten analyseren en bevindingen vertalen naar concreet toepasbaar advies** - which is exactly how I work. At EURECOM, I ran systematic ablation studies across transformer block unfreezing depth, learning rate schedules, and augmentation strategies on a **428M-parameter CLIP ViT-L/14** model, translating every result into a documented design decision. That experiment-to-recommendation loop ranked me **#1 on the EURECOM leaderboard** out of the entire cohort.

Your research scope covers how **Generative AI** can support technical workflows and where **Agentic AI** adds genuine value versus where human judgment remains essential - a question I have worked with in practice. Fine-tuning across **25+ generative model types** (Stable Diffusion, DALL-E, Midjourney, GAN variants) required me to understand exactly what these systems produce and where they fail. Separately, at **Orange Maroc**, I built an end-to-end ML pipeline on **100K+ telemetry records** that reduced manual analysis time by **~60%** and directly shaped commercial go-to-market decisions - the kind of concrete, responsible AI application your assignment targets.

Capgemini's SAP practice operates at a scale where AI tooling recommendations get adopted across entire project portfolios, not just single teams - that reach is what makes this assignment worth doing rigorously. I would welcome the chance to discuss how my background maps to your September 2026 start.

Sincerely,

AYMANE AIT DADS
