Hiring Team - Data Science Intern (AI for Placement and Inventory Management)

HP Inc. · Sophia Antipolis / Global Supply Chain

Dear HP Data Science Hiring Team,

Your requirement for someone who can **develop AI-driven solutions to optimize inventory management and forecasting across global operations** maps directly to what I did at Orange Maroc: I engineered an **end-to-end ML pipeline on 100K+ live telemetry records**, delivering KMeans segmentation that mapped 5 distinct user performance profiles to commercial service tiers - output that went straight into go-to-market decisions for senior management.

Two proof points tied to your preferred qualifications: first, I built and presented **executive-ready Power BI dashboards** from raw data to C-suite stakeholders, reducing manual analysis time by **~60%** - exactly the analytical-to-non-technical communication loop HP's supply chain context demands. Second, my transformer fine-tuning work (CLIP ViT-L/14, **428M parameters, 250K training samples**) gives me hands-on depth in the **deep learning architectures and LLM/embedding familiarity** your preferred qualifications call out.

HP runs one of the world's most complex supply chains - spanning components, finished goods, and global distribution at a scale where a 1% forecasting improvement translates to hundreds of millions in working capital. That is the kind of environment where rigorous ML work has real weight, and where I want to contribute. I would welcome the chance to discuss how my pipeline and modeling experience fits your team's current priorities.

Sincerely,

AYMANE AIT DADS
