Hiring Team - Summer Intern, Bioinformatics and Data Science

Assembly Biosciences, Inc. · South San Francisco, CA, USA

Dear Assembly Biosciences Hiring Team,

Your internship calls for applying **AI/ML methods to biological and chemical data** in a drug discovery setting - exactly the intersection where I operate. As a Data Science Engineering student at EURECOM, I ranked **#1 on the class leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples spanning 25+ data distributions, running rigorous ablation experiments to identify what drives generalization versus overfitting - the same analytical discipline required when biological signals are noisy and labels are scarce.

On the **end-to-end ML pipeline** side: at Orange Maroc I engineered a pipeline over **100K+ telemetry records** using **Random Forest and KMeans**, cutting manual analysis time by **~60%** and mapping outputs directly to business decisions - demonstrating that I own pipelines from raw data ingestion to stakeholder-ready results. Separately, I built an **unsupervised transformer autoencoder** for anomaly detection achieving **AUC 0.80** with no labeled anomalies, a setup closely analogous to rare-event detection in **computational biology** workflows.

Assembly Biosciences is advancing antiviral programs against hepatitis B and microbiome-related targets where clean, interpretable data pipelines are as critical as the biology itself. I want to spend this summer building computational tools that feed real drug discovery decisions, not just academic benchmarks. I would welcome the chance to discuss how my work fits your team's current priorities.

Sincerely,

AYMANE AIT DADS
