Hiring Team - Data Science Intern

Claro Enterprise Solutions LLC · United States

Dear Hiring Team,

Your internship centers on **enabling non-technical users to query structured databases using natural language** - exactly the intersection of NLP and data engineering I have been building toward. At Orange Maroc, I owned an **end-to-end ML pipeline** processing over **100,000 network telemetry records**, translating raw structured data into executive-ready outputs that reduced manual analysis time by roughly 60% - the same translation from complex data to accessible insight your AI solution targets.

On the AI development side, I fine-tuned **CLIP ViT-L/14 (428M parameters)** on **250,000 samples**, running systematic ablation experiments across transformer unfreezing depth and learning rate schedules to ensure robust, generalizable outputs - the kind of **accurate and reliable responses** your solution must deliver to business stakeholders. For structured data work, I built **KMeans segmentation** mapping five user profiles directly to commercial service tiers, demonstrating that I connect **SQL-backed analytics** to decisions, not just dashboards.

Claro's focus on bridging IT and business stakeholders through AI-powered data access is a concrete engineering problem I want to work on - not a generic analytics role. I would welcome the chance to discuss how my pipeline and transformer experience maps to your current development sprint.

Sincerely,

AYMANE AIT DADS
