Hiring Team - AI & Automation Intern

Credix · São Paulo, Brazil (Remote)

Dear Credix Hiring Team,

Credix builds **proprietary credit intelligence** in a market where traditional financial infrastructure does not yet exist - and doing that at scale requires automation that is both reliable and fast. At Orange Maroc, I engineered an **end-to-end ML pipeline** processing over **100K+ network telemetry records**, cutting manual analysis time by ~60% and delivering segmentation outputs that directly shaped commercial decisions - exactly the kind of automation-for-real-impact work Credix is describing.

Beyond pipelines, I bring hands-on experience with **transformer fine-tuning** at production scale: I ranked **#1 on the EURECOM leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples, running systematic ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies. I also built a full **NLP pipeline** - from TF-IDF baseline through word2vec to transformer fine-tuning - improving sentiment classification accuracy by **12 percentage points**, which maps directly to the text-based credit signal extraction Credix needs for Brazilian SME decisioning.

CrediPay originating over R\$700M per year in B2B credit to Brazilian SMEs while operating without legacy financial rails is a genuinely hard technical problem - the kind where better automation compounds directly into better credit outcomes. I would welcome the chance to discuss how I can contribute to that system.

Sincerely,

AYMANE AIT DADS
