Hiring Team - Machine Learning Engineer Intern - Image Generation

Genies · Los Angeles, CA, USA

Dear Genies Hiring Team,

Genies is building the **visual and embodiment layer for AI** - which means image generation quality is not a research metric, it is the product. Ranked **#1 on the EURECOM leaderboard** for AI-generated image detection, I fine-tuned **CLIP ViT-L/14 (428M parameters)** on 250K samples spanning Stable Diffusion, DALL-E, Midjourney, and GAN variants - developing a precise, hands-on understanding of what separates high-fidelity generated imagery from noise.

To make that model production-viable on a constrained GPU budget, I implemented **FP16 mixed precision with GradScaler** and a **10-view test-time augmentation** strategy for out-of-distribution robustness. I also ran systematic ablation studies across transformer block unfreezing depths (**4, 6, and 8 layers**) and learning rate schedules, proving that **1-epoch fine-tuning** preserves generalization better than extended re-training - the kind of empirical discipline that matters when shipping image models at scale.

Genies is not building static avatars - it is building AI personas that look and behave like living identities, which means the image generation pipeline underpins every product surface. I want to contribute directly to that visual layer. I would welcome the chance to discuss how my work fits your roadmap.

Sincerely,

AYMANE AIT DADS
