Hiring Team - Data Science Intern

HERE Technologies · Eindhoven, Netherlands

Dear HERE Data Science Hiring Team,

Your posting calls for someone who can **translate ambiguous business problems into clearly scoped projects** and take full ownership of the **data science workflow** - exactly what I did at Orange Maroc, where I independently owned an **end-to-end ML pipeline** on over 100,000 network telemetry records, from raw data ingestion to executive-ready dashboards, reducing manual analysis time by roughly 60%.

On the **exploratory data analysis and model development** side, I engineered a **Random Forest + KMeans** pipeline that identified the top 3 network-quality drivers and mapped **5 distinct user performance profiles** directly to commercial service tiers - translating a noisy telemetry dataset into a go-to-market decision. On the rigorous experimentation side, I ranked **#1 on the EURECOM private leaderboard** by fine-tuning **CLIP ViT-L/14 (428M parameters)** on 250,000 samples, running structured ablation studies across unfreezing depth, learning rate schedules, and augmentation strategies to prove which choices generalized beyond training distribution.

HERE sits at the intersection of location intelligence and machine learning at a scale few companies match - your HD Live Map and real-time traffic models are exactly the kind of complex, multidisciplinary systems I want to contribute to. I would welcome the chance to discuss how my pipeline experience maps to your current projects.

Sincerely,

AYMANE AIT DADS
