Hiring Team - Machine Learning Systems Intern

Meshy · Remote / San Francisco, USA

Dear Meshy Hiring Team,

Your posting calls for someone with **strong technical fundamentals** and a spirit of innovation at the intersection of **AI and graphics** - that description fits what I built at EURECOM: I ranked **#1 on the class leaderboard** by fine-tuning a 428M-parameter CLIP ViT-L/14 on 250K images spanning 25+ generative model types, including Stable Diffusion, DALL-E, and Midjourney variants - the exact generator families powering modern 3D asset pipelines like Meshy's.

Two results that map directly to what you need: At **Orange Maroc**, I engineered an **end-to-end ML pipeline** over **100K+ telemetry records** - owned from raw ingestion to production-ready output - cutting manual analysis time by **~60%**. On the systems side, I optimized a vision model for real GPU constraints using **FP16 mixed precision with GradScaler** and designed **10-view test-time augmentation** to maintain out-of-distribution robustness, proving that engineering discipline and model quality are not a tradeoff.

Meshy is turning text and images into production-ready 3D assets - a problem where the gap between a model that works in a notebook and one that ships in a product is enormous. That gap is exactly where I operate. I would welcome the chance to discuss how I can contribute to your ML systems work this summer.

Sincerely,

AYMANE AIT DADS
