Hiring Team - SAP SuccessFactors iXp Intern - AI Software Developer (SUMMER 2026)

SAP · San Ramon, USA

Dear SAP SuccessFactors Hiring Team,

Your requirement to **design, develop, and deliver new features** across the full development lifecycle - from requirements analysis to architecture, coding, testing, and delivery - maps directly to how I operate. At Orange Maroc, I independently owned an **end-to-end ML pipeline** processing over **100K network telemetry records**, taking the system from raw data ingestion through modeling to executive-ready dashboards, cutting manual analysis time by 60% - no handoffs, no gaps.

To meet your expectation of **scalable distributed systems** and **cloud-native deployments**, I bring hands-on engineering discipline: I trained a **428M-parameter CLIP ViT-L/14** model on 250K samples under real GPU constraints using **FP16 mixed precision and GradScaler**, ranking **#1 on the EURECOM leaderboard**. I also designed ablation experiments systematically varying transformer block unfreezing depth, learning rate schedules, and augmentation strategies - the same rigorous, iterative mindset your **agile scrum team** setup demands.

SAP SuccessFactors powers HR decisions for a significant share of global enterprises, and the compensation module sits at the intersection of distributed systems complexity and real business impact - exactly where I want to build. I would welcome the chance to contribute to your San Ramon team starting June 2026.

Sincerely,

AYMANE AIT DADS
