Hiring Team - AI Software Intern

UL, LLC · Austin, Texas, USA

Dear UL Solutions Hiring Team,

Your posting calls for someone to **prototype and evaluate agent-based AI solutions** that support complex workflows and orchestration - exactly the scope I operated in when I fine-tuned **CLIP ViT-L/14 (428M parameters)** on 250K samples across 25+ generative model types, designing systematic ablation studies on transformer block unfreezing depth and inference strategies that ranked **#1 on the EURECOM private leaderboard**. I build and evaluate AI systems under real constraints, not just notebooks.

On the **LLM and intelligent automation** side, I built a complete NLP pipeline progressing from TF-IDF through word2vec to **transformer fine-tuning**, gaining **12 percentage points** over baseline - directly relevant to the reasoning and orchestration layers your team works on. For enterprise-scale data workflows, I engineered an end-to-end **ML pipeline over 100K+ telemetry records** at Orange Maroc, reducing manual analysis time by **~60%** and delivering segmentation outputs that drove real go-to-market decisions.

UL Solutions sits at an unusual intersection: safety science credibility plus an active push into enterprise AI automation - a combination where rigorous evaluation of AI outputs is not optional but core to the product. I would welcome the chance to contribute to that work in Austin this summer and can be reached at [Aymane.Ait-dads@eurecom.fr](mailto:Ayman.Ait-dads@eurecom.fr) to discuss next steps.

Sincerely,

AYMANE AIT DADS
