Hiring Team - AI Software Intern

UL Solutions · Austin, Texas, USA

Dear UL Solutions Hiring Team,

Your posting calls for someone who can **prototype and evaluate agent-based AI solutions** supporting complex reasoning and orchestration - exactly the kind of work I have been building toward. At EURECOM, I ranked **#1 on the class leaderboard** for a task requiring robust, generalizable AI: fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K images spanning 25+ generative model types, designing ablation experiments across unfreezing depth, learning rate schedules, and augmentation strategies to prove which configurations actually hold up under distribution shift.

Prototyping alone is not enough - enterprise workflows require systems that scale. At Orange Maroc, I engineered an **end-to-end ML pipeline** over **100K+ telemetry records**, cutting manual analysis time by **~60%** and delivering segmentation outputs that directly mapped to commercial service tiers - a real **intelligent automation** outcome, not a proof of concept. On the **LLM and transformer** side, I have built fine-tuning pipelines using **Hugging Face Transformers**, including a full NLP pipeline from TF-IDF baselines through transformer fine-tuning that improved sentiment classification by **12 percentage points** over baseline.

UL Solutions sits at the intersection of safety science and enterprise software - applying AI to workflows where correctness and reliability are non-negotiable. That constraint is more interesting than open-ended research, and it maps directly to how I build: optimized for real constraints, not just benchmark numbers. I would welcome the chance to discuss how I can contribute to your agentic AI work this summer.

Sincerely,

AYMANE AIT DADS
