Hiring Team - AI Engineer - INTERNSHIP (Applied AI, RAG / Python background)

Cistema Pte Ltd · Singapore

Dear Cistema AI Team,

Your role calls for someone ready to **deploy agents and build RAG pipelines** from day one - not learn what they are. My background sits precisely there: advanced **Python**, hands-on transformer fine-tuning at scale (CLIP ViT-L/14, 428M parameters, 250K samples), and a track record of shipping end-to-end ML systems under real constraints rather than leaving them as notebooks.

Two proof points mapped directly to your stack: at **Orange Maroc**, I engineered a production **ML pipeline** over **100K+ telemetry records** - owning ingestion, modeling, and executive-facing dashboards - cutting manual analysis time by **~60%**. On the model side, I built a complete **NLP pipeline** (tokenization - TF-IDF - **word2vec** - **transformer fine-tuning**) that improved sentiment classification accuracy by **12 percentage points** over baseline, directly relevant to the retrieval and language understanding layer in any **RAG** system.

Cistema is building healthcare AI tools for physicians and patients - a domain where retrieval accuracy and low hallucination rates are not nice-to-haves but clinical requirements. That constraint makes the RAG engineering problem here meaningfully harder than generic enterprise deployments, and that is exactly the kind of work I want to contribute to. I would welcome a conversation with your engineering team at your convenience.

Sincerely,

AYMANE AIT DADS
