Hiring Team - AI Vision Engineer | AgroTech | Machinebouw

Viscon Group · Harderwijk, Netherlands

Dear Viscon Group Hiring Team,

Your job description asks for someone who can move from raw image collection on a production line to defining **what a vision model must detect** - and that is exactly the loop I have closed in practice. In 2026, I ranked **#1 on the EURECOM private leaderboard** for AI-generated image detection by fine-tuning **CLIP ViT-L/14** on 250,000 training samples spanning 25+ generator types, designing the full inference pipeline from augmentation strategy through to out-of-distribution-robust prediction.

Two achievements map directly to your vision engineering scope. First, on the **algoritmeontwikkeling** side: I ran systematic ablation studies across transformer block unfreezing depth (4, 6, and 8 layers) and learning rate schedules, proving that **1-epoch fine-tuning** generalises better than extended retraining - the kind of model behaviour analysis your engineers need before committing to a deployment configuration. Second, on the **unsupervised anomaly detection** side: I built a transformer autoencoder achieving **AUC 0.80** on industrial audio fault detection with no labeled anomalies, directly mirroring the challenge of detecting rotte or onrijp fruit before ground-truth labels exist on a new production line.

Viscon's stated mission - reducing food waste and making production chains more sustainable through automated vision systems - is one of the few application domains where a better detection model has a direct, measurable effect on the global food supply. I would welcome the chance to discuss how my experience fits your current project pipeline.

Sincerely,

AYMANE AIT DADS
