Hiring Team - Data Science Intern

DZYNE Technologies · Irvine, California, USA

Dear DZYNE Technologies Hiring Team,

DZYNE builds **field-proven, production-ready** defense systems deployed across 50+ countries - that demands data science that ships, not just experiments. When EURECOM ran a competitive benchmark on AI-generated image detection, I ranked **#1 on the private leaderboard** by fine-tuning a **428M-parameter CLIP ViT-L/14** on 250K samples spanning 25+ generator types - the kind of high-stakes, real-constraint modeling that maps directly to production-grade autonomous systems work.

At **Orange Maroc**, I engineered an end-to-end **ML pipeline over 100K+ network telemetry records** using **Random Forest and KMeans**, cutting manual analysis time by **~60%** and delivering segmentation outputs that directly drove go-to-market decisions - proving I own pipelines from raw ingestion to executive dashboards. Separately, my ablation studies on transformer unfreezing depth and learning rate schedules show I treat model development with the rigor a **U.S. Government Program of Record** environment requires.

DZYNE's position as the manufacturer behind airborne and ground-based autonomous platforms backed by U.S. Government Programs of Record means the data problems here have real operational consequences - that is exactly the stakes I want to work at. I would welcome the chance to discuss how I can contribute to your team this summer.

Sincerely,

AYMANE AIT DADS
