Hiring Team - Machine Learning Intern

Integral Ad Science UK Branch Office Italia · Milan, Italy

Dear IAS Multimedia Services Team,

Your Multimedia Services team needs someone who can build and ship **embeddings-based systems** for real-world media measurement - that is exactly what I do. Fine-tuning **CLIP ViT-L/14 (428M parameters)** on **250,000 training samples** spanning 25+ generative model types, I ranked **#1 on the EURECOM private leaderboard** for AI-generated image detection, delivering robust out-of-distribution inference through a 10-view test-time augmentation strategy I designed from scratch.

On the **agentic and pipeline** side, I engineered an end-to-end **ML pipeline on 100K+ records** at Orange Maroc using **Random Forest and KMeans**, cutting manual analysis time by **~60%** and mapping outputs directly to commercial decisions - the kind of actionable data IAS delivers to advertisers at scale. Separately, I ran structured **ablation experiments** across transformer unfreezing depth (4/6/8 layers) and learning rate schedules, proving that disciplined experimentation, not brute-force compute, drives generalization.

IAS sits at the intersection of media safety, real-person verification, and multimedia AI - problems where embedding quality and model robustness are not academic concerns but revenue-critical ones. I want to contribute to that directly. I would welcome a conversation about how my work on vision embeddings and production pipelines maps to what your team is building this summer.

Sincerely,

AYMANE AIT DADS
